

ACTIVATING AN ELECTRICAL AND/OR WATER OUTLET FROM A SMARTPHONE

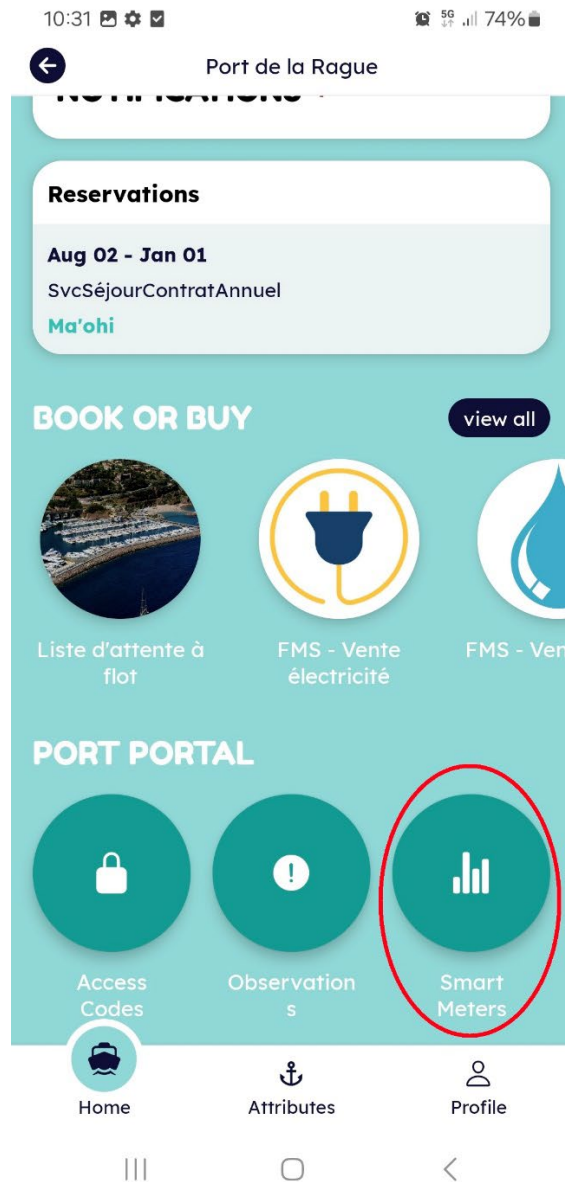

Select the app on your smartphone after **downloading it**

After **logging in**, you will be taken to your **home screen**. Select the **Port of La Rague**

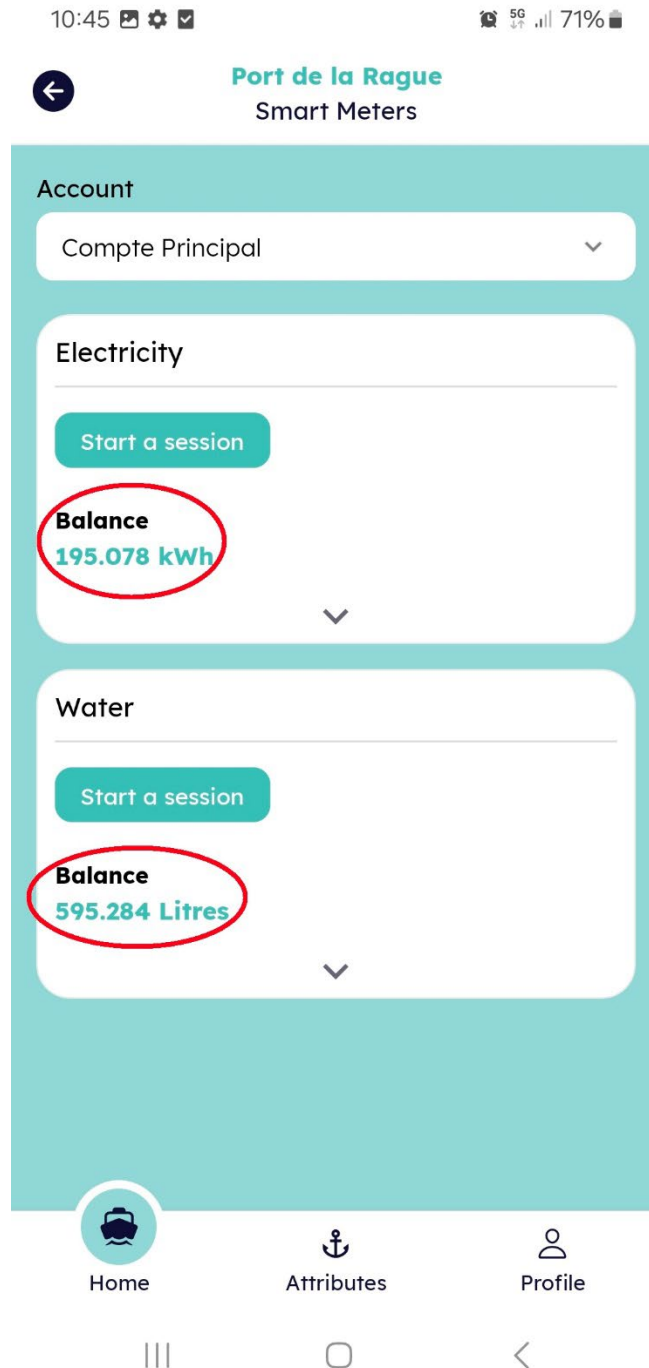

Navigate on your screen to the "smart Meters" section

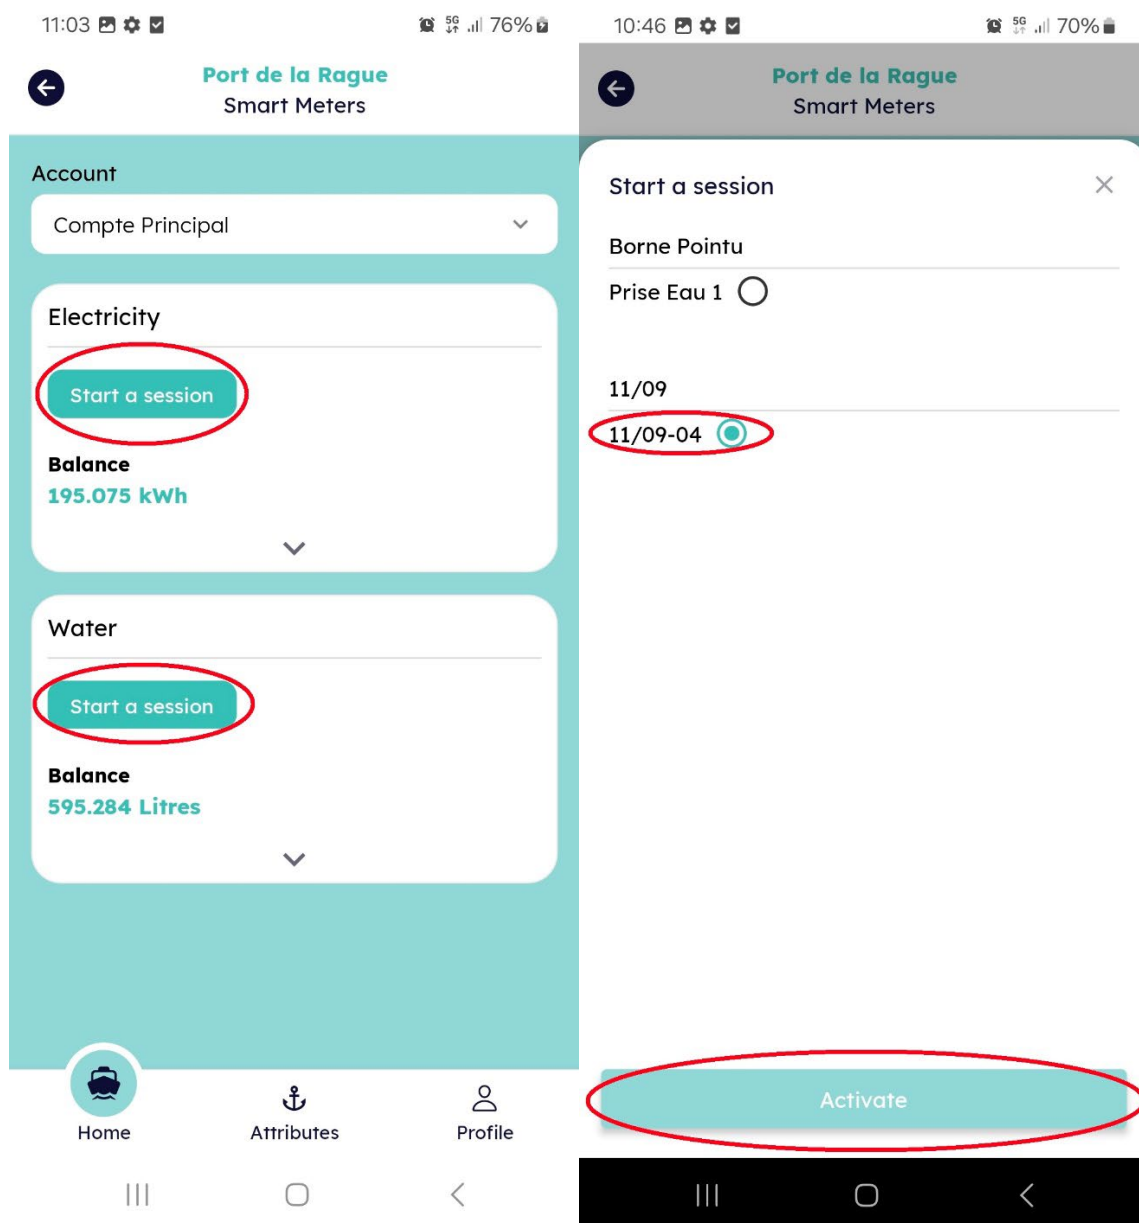

Select this topic

You can now navigate to your **customer area**, with your electricity and water **balance**

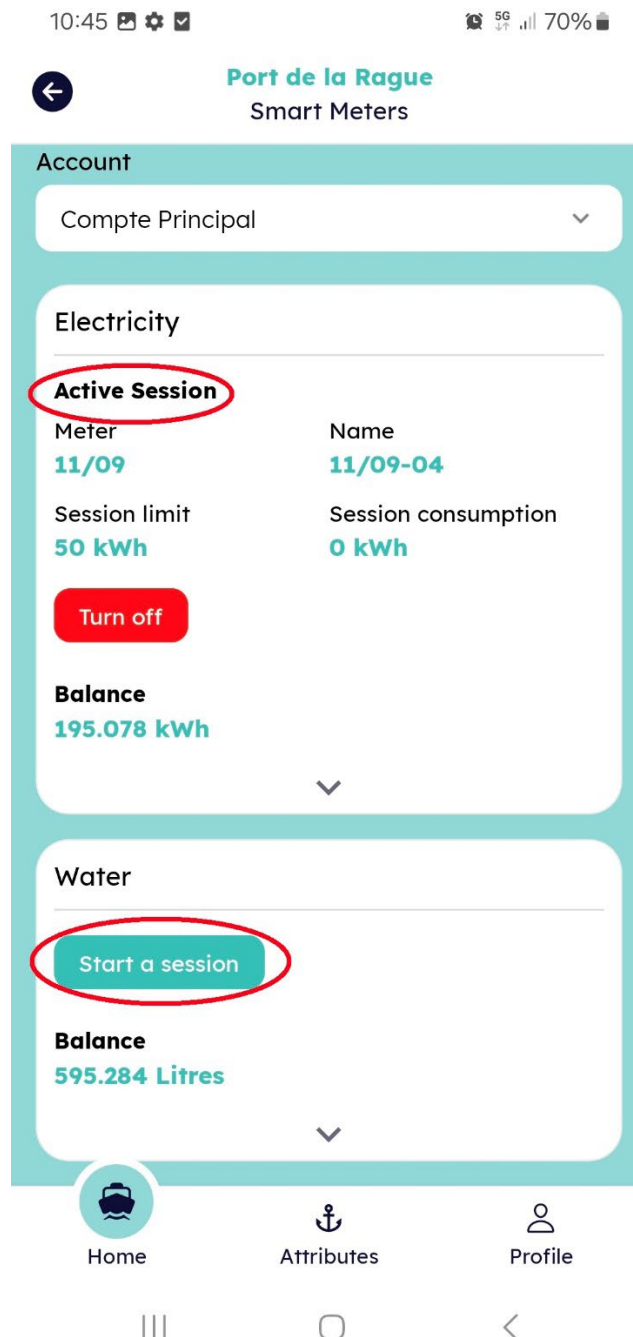

Simply select "start a session" to **turn on** the electricity and/or water. The operation must be carried out in **2 steps**. Activate one at a time. Once the session is launched, choose your distribution point (default on your space)

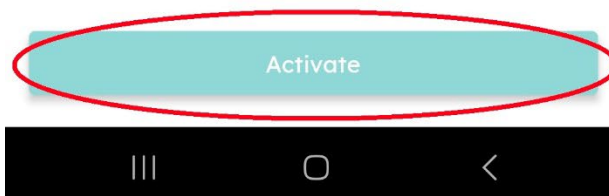

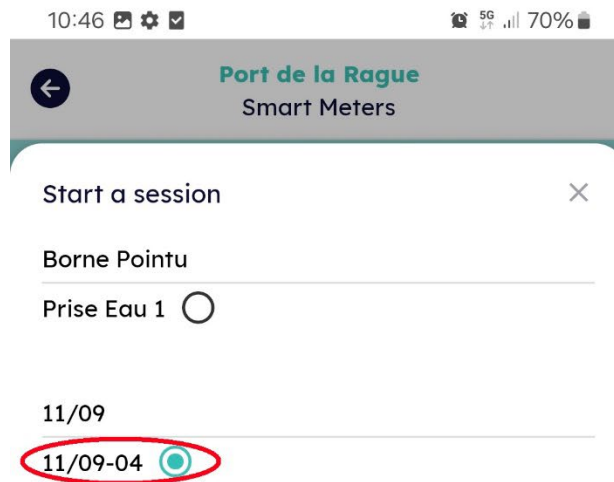

Then click on "activate"

Your electric charging station now distributes electricity as long as your socket is plugged in

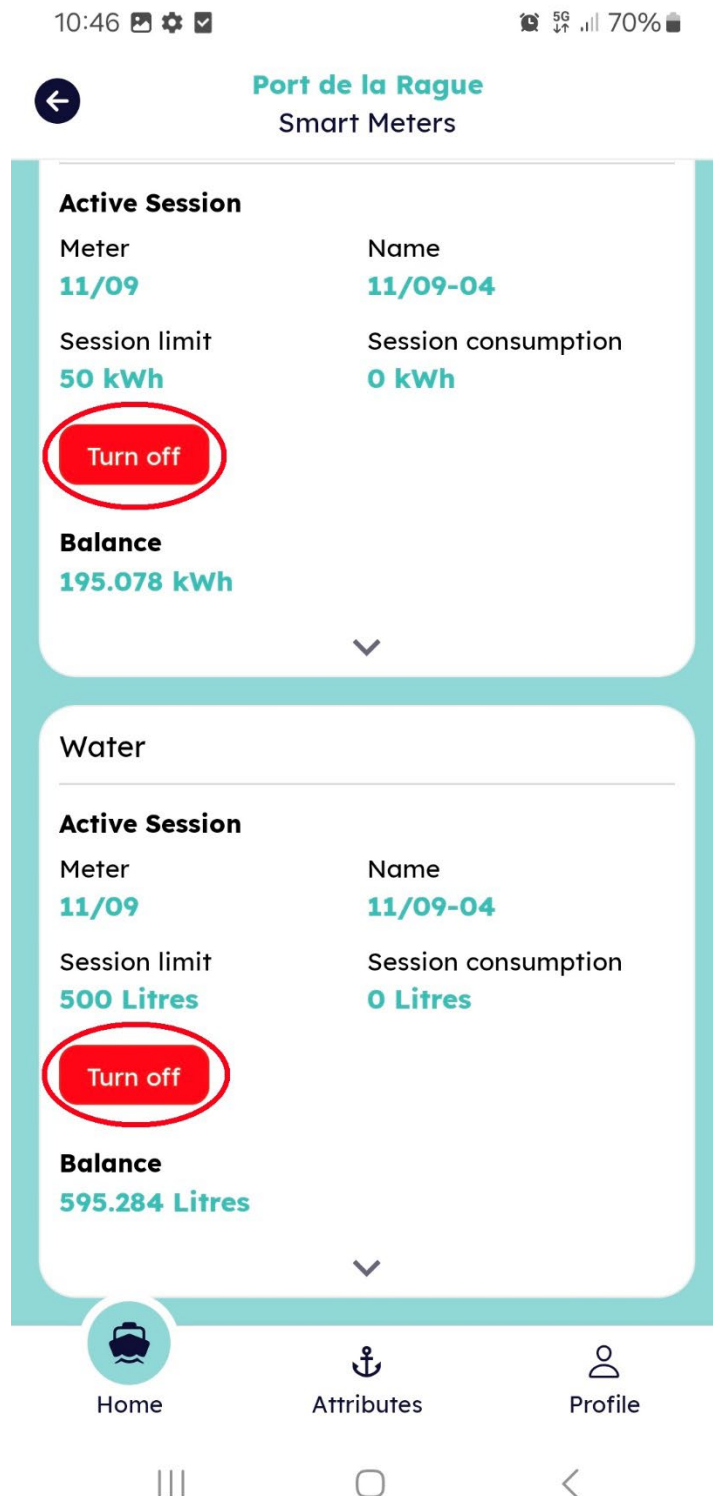

For water distribution, the process is the **same**. Select "**launch a session**". You choose your **distribution** point (again by default).

All you have to do is click on "**Activate**" and the water distribution is then accessible. You must remember to deactivate the water, because even when **disconnected**, the distribution **remains open until you deactivate it**.

Your ship is **now connected** to electricity and water. To **desactivate**, you must then click on « **turn off** ».
